An AI adviser that holds your whole career history

Most AI tools forget you between sessions. Career Adviser keeps a private workspace of everything you have actually done, applied for, and said in interviews.

Install: `npx skills add krutenyuk/career-adviser -g`

01

Evidence from your history, not guesses from your prompt

When you ask a generic AI "what should I do next in my career?", it can only use what you tell it in that one conversation. Career Adviser is different: it reads your private workspace of CV versions, job descriptions, and interview transcripts, and labels every claim by how well it is supported.

CONFIRMED	8 years leading product teams in fintech — from your CV and three interview transcripts
INFERRED	Strong stakeholder management likely from P&L ownership — reasonable, but not your stated claim
GAP	No demonstrated public-facing technical writing — this role requires it; your profile has none

It never invents experience or embellishes metrics. Gaps are named, not smoothed over.

02

Getting started

1 **Install the skill globally**

Run once — the skill becomes available in every agent and project from that moment on.

```
npx skills add krutenyuk/career-adviser -g
```

2 **Create your workspace folder**

A private folder anywhere on your machine — for example `~/my-career`. Add `profile.md` to it (you'll fill it in the next step), and create subfolders `cv/`, `jobs/`, `transcripts/`, `outcomes/`.

3 **Open any supported agent and point to your workspace**

Works in Claude Code, GitHub Copilot, and Codex. Say: `"Run career-compass using my workspace at ~/my-career"`

03

Fill your profile.md — the more you add, the more precise the advice

profile.md is the foundation of everything Career Adviser knows about you. It reads this file at the start of every session. Write in plain prose — complete sentences are better than bullet points.

Example — real entries work better than templates

WHO YOU ARE	Anya K. — Senior PM, Berlin. 8 years in fintech and e-commerce. Looking for Head of Product or Group PM at a growth-stage company.
WORK HISTORY	2020–present Senior PM, FinTech Co. — 3 PMs, €2M budget 2017–2020 PM, E-commerce startup — 0→1 launch, 120k users
ACHIEVEMENTS	Reduced checkout time 34% → +12% conversion. Hired first data science team of 4.
CAREER GOALS	Head of Product or Group PM at a B2C scale-up in fintech or marketplace. Berlin or remote.
KEY SKILLS	Product strategy · Stakeholder management · SQL · OKR facilitation
LANGUAGES	Russian (native) · English (C1) · German (B2)

04

Four capabilities — each drawing on your workspace

01 **Career Compass**

Stuck or considering a change? Get realistic direction options grounded in your actual experience — a real map of where you can credibly go, not a wishlist.

02 **Vacancy Fit**

Paste a job description. Find out exactly how well you fit — named gaps, transferable strengths, honest read of the competition.

03 **CV Review**

Tailored rewrites and positioning advice for each target role. Tracks your CV versions and what changed between them.

04 **Interview Review**

Add your interview transcripts. Extract what landed, what didn't, and the patterns that emerge across all your conversations.

05

Expand your workspace

Career Adviser reads any file you put in your workspace folder. The richer the context, the more precise the analysis.

WORDING FILES **Add seniority-level definitions for your field**

Find or write a file that describes what is expected at each level — Junior PM, Senior PM, Principal PM (or whatever levels apply in your field): scope, responsibilities, typical achievements. Save it to your workspace as `seniority-levels.md`.

Then tell Career Adviser: *"Use seniority-levels.md in my workspace to calibrate where I stand against each level."* It will cross-reference your profile and CV against the definitions and tell you exactly what is confirmed, what is inferred, and what is missing for each step up.

VOICE RECORDER **Record interviews with Wispr Flow and save the transcript**

Turn on Wispr Flow's Notetaker (or any meeting recorder — Otter.ai, Fireflies, Fathom) before an interview. After the call, save the transcript file to `transcripts/` in your workspace — for example `transcripts/acme-2024-10.md`.

Career Adviser reads it in your next session, extracts what landed and what didn't, and builds the interview into its picture of your patterns over time.

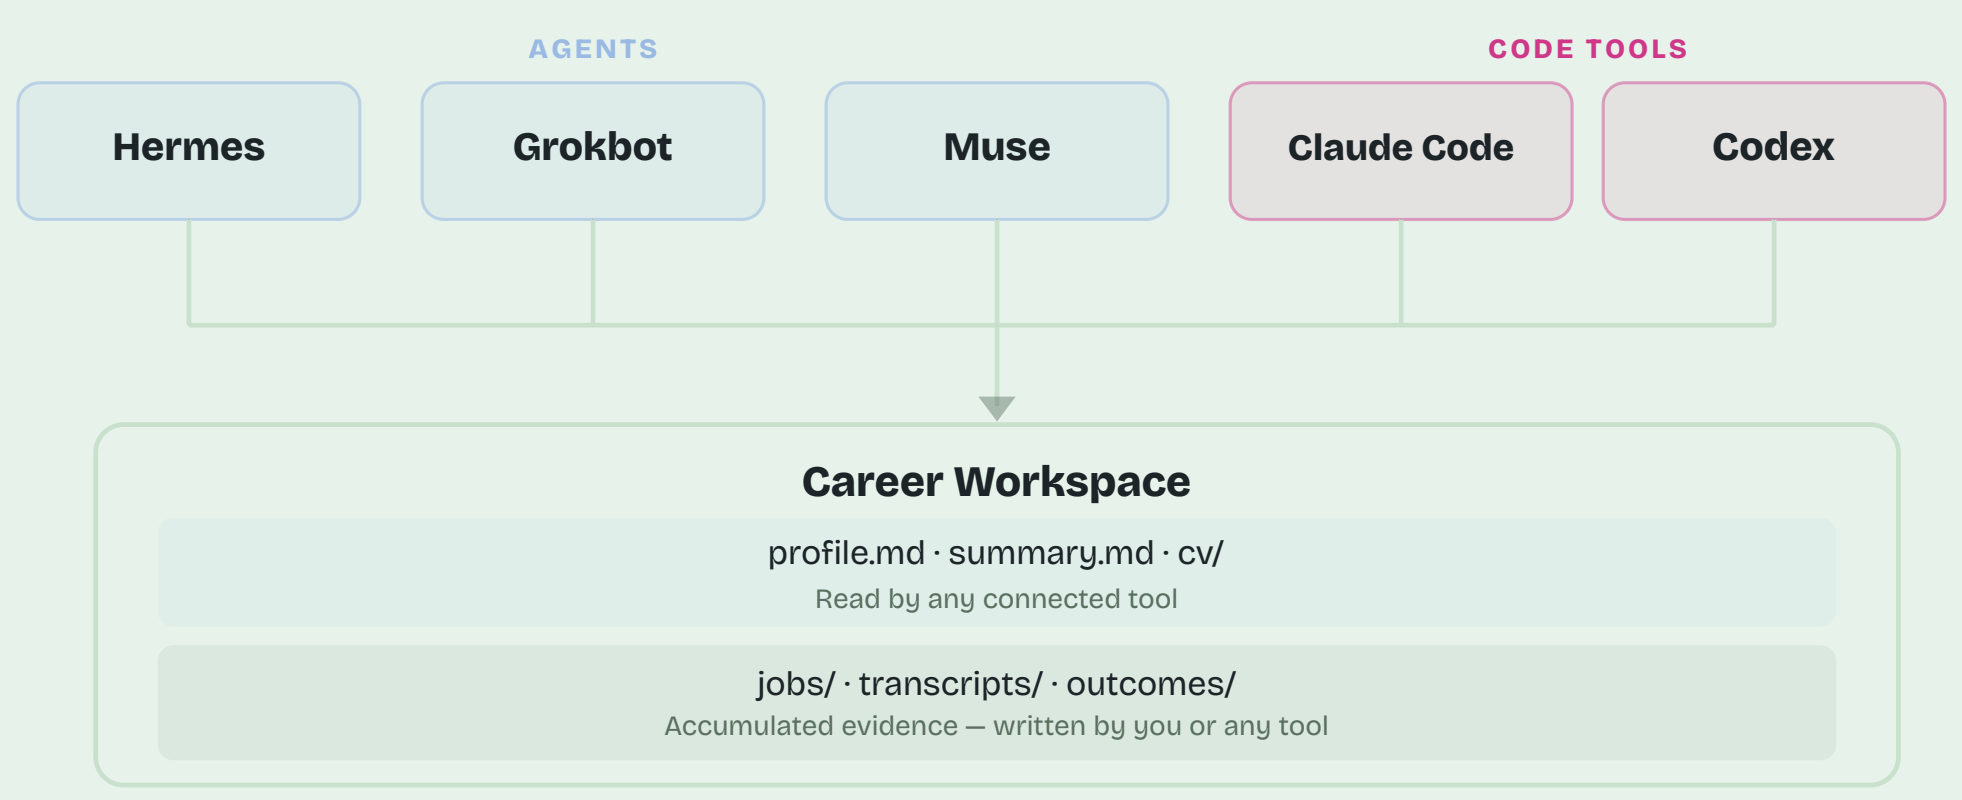
JOB LIBRARY **Save every job description you seriously consider**

Even if you don't apply — save the description to `jobs/`. Over time Career Adviser builds a picture of what draws you: which industries, scope, team sizes, and requirements appear repeatedly in the roles you pay attention to.

06

Your workspace works with any AI tool

The workspace is a plain folder of Markdown files on your own machine. Any AI agent or code assistant that can read files can plug straight in — no API, no account, no configuration beyond pointing at the folder path.



AGENTS
CODE TOOLS
Hermes
Grokbot
Muse
Claude Code
Codex
Career Workspace
profile.md · summary.md · cv/
Read by any connected tool
jobs/ · transcripts/ · outcomes/
Accumulated evidence — written by you or any tool

Any tool that reads files can join

Drop any agent's working directory at your workspace folder — Notion AI, Obsidian, a custom script. It immediately picks up everything Career Adviser has been building. No API, no sync step, no integration work.

Focus a sub-workspace per target company

Targeting one company seriously? Create `jobs/acme/` with their descriptions, your research notes, and interview prep. Point any tool at just that subfolder for tight, company-specific context — without mixing it into your general workspace.

Chain agents across sessions

Ask Grokbot to research a company and save its findings to `jobs/acme-research.md`. Next session Career Adviser reads that file automatically — one agent's output feeds another agent's context, with no copy-paste and no context window gymnastics.

Install once, use everywhere

```
npx skills add krutenyuk/career-adviser -g
```

Works inside **Claude Code**, **Codex**, and any agent that can read files. Install globally once — available in every tool and project on your machine.
